

(A) Full information: linear models with dependent data

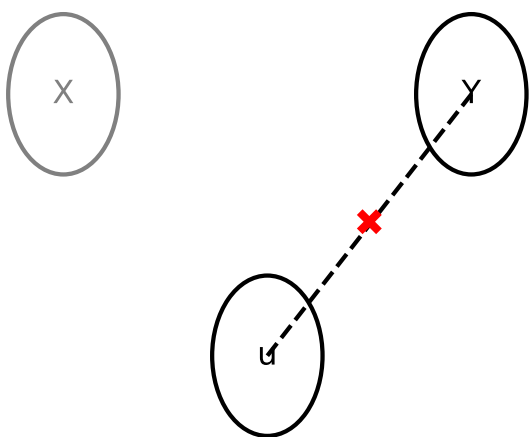

both $X \leftrightarrow Y$ and $u \leftrightarrow Y$ observed

(B) Unlinked regression / unlabeled sensing

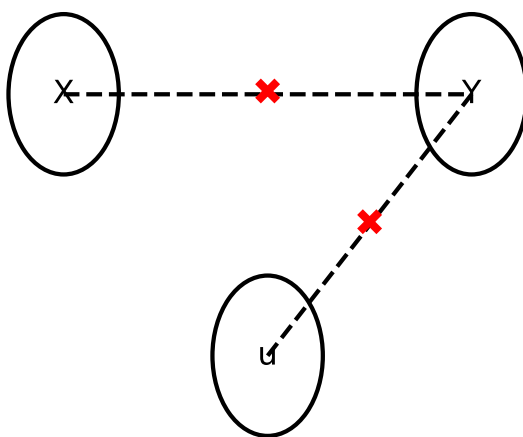

$X \leftrightarrow Y$ broken, u ignored

(C) Seriation / pseudotime / spike sorting

$u \leftrightarrow Y$ broken, X ignored

(D) This paper: unlinked linear models for dependent data

both $X \leftrightarrow Y$ and $u \leftrightarrow Y$ broken
privacy-sensitive data fusion; multimodal dependent-data settings
